

Economic Development Impacts of 20% Wind

Marguerite Kelly, NREL

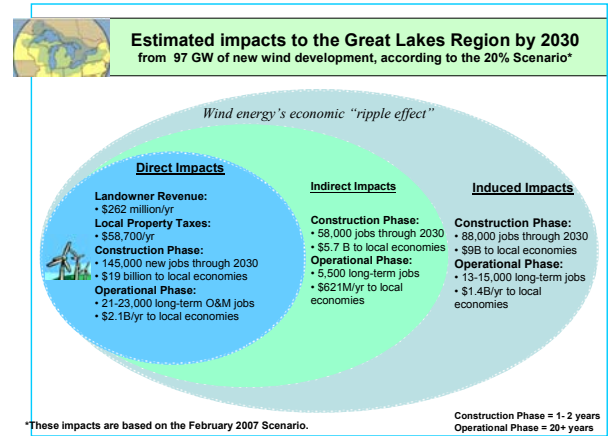

Suzanne Tegen, NREL

Meeting 20% of the nation's electricity demand with wind energy will lead to enormous benefits to rural landowners and towns, the manufacturing sector, and infrastructure across America.*

- Findings of the 20% Scenario:
- 20% wind energy penetration is possible.
 - 20% penetration is not going to happen under business as usual scenarios.
 - Policy choices will have a large impact on assessing the timing and rate of achieving a 20% goal.
 - Key issues: policy, technology development, market transformation, transmission, project diversity and public acceptance.

- How large are the investments and what will they impact?
- 323 GW of new wind installed in the U.S.
 - Over \$313 Billion in investment
 - 1 million new construction jobs (cumulative through 2030)
 - 2.33 million job-years, during operations (cumulative for 20 years)
 - Increased income for rural landowners and
 - Property tax revenue for schools, roads and county services

About the Jobs and Economic Development Impact model (JEDI)

JEDI is an input-model that can be adapted to your local area (state, county or region). JEDI:

- Traces linkages in the economy: what are economic impacts from dollars spent on the wind project?
- Economic development impacts include jobs created, wages and salaries earned, and increases in overall economic activity.
- JEDI uses state and county multipliers derived from the Minnesota IMPLAN Group, Inc. (IMPLAN) accounting software and data derived from government surveys of business and consumer spending patterns.
